ELECTRICAL EQUIPMENT PLANT 212
LENINGRAD, USSR

The Electrical Equipment Plant 212, a major producer of precision instruments, electric meters, and gauges, is located along the south-eastern edge of Aptekarskiy Island, approximately 600 feet northwest of the Svobody Bridge over the Bol'shaya Nevka River.

A comparison of [REDACTED] reveals that the only apparent change in this plant has been the construction of a new 4-story assembly building 50 by 65 feet, on the site of a former 1-story building which measured 35 by 105 feet (Item 25 on accompanying photograph). The plant occupies an entire city block, approximately 500,000 square feet in area, and is completely enclosed by a security fence. No rail lines can be seen entering the plant but an open storage area along the eastern edge of the plant is adjacent to a street car line.

25X1D

The existence of antenna structures connected with radar or communications systems could not be determined from a study of this small-scale photography.

The major components of the plant are described in the following tabulation and identified by corresponding numbers on the accompanying annotated photograph.
